

# VERMEC Multi-Purpose Chisel Set

This versatile tool is made from stainless steel. The removable handle has an easy grip rubber finish and is loaded with lead shot which takes the shocks and gives it good balance. The handle is bored to take a 12mm round shaft so that it can be used with any tool with the same size shaft, which includes most of the P&N range. The handle can be fitted with two different shafts, one with a cutter head, designed to hold 3/16 inch square high speed steel cutters for deep hollowing situations, the other with a circular shear scraper (25mm) or the rotary cutter to produce a fine finish reducing the sanding time required.

**All parts can be replaced or bought separately as desired - please see Chisel set accessories.**
