

## Vicmarc Hollowing Tool Support System

The camlock locking system allows the hollowing tool support to be positioned anywhere on the lathe bed. This unique Vicmarc design hollowing tool system allows you to move freely along the toolrest with an effortless action, as there are ball bearings providing smooth movement in the joints. This was originally designed to help turn oval bowls on the Vicmarc Oval Turning Device VOD300. Can also be used as a laser guide hollowing tool. Will fit lathes with a centre height from 150mm - 300mm. (Swing away from 300mm to 600mm).
